**HW_10. Definitions; Shanahan Qs and Qs from “Bless Me, Ultima”
(Convert to 10 pt scale)**

Criteria / Score	3 - Excellent	2 - Satisfactory	1 - Needs Improvement
Task 1: Definitions	Definitions for 14 terms related to AI; definitions are clear, concise, and accurate.	Some definitions are missing; answers are ambiguous or inaccurate	Most definitions are missing; answers are ambiguous or inaccurate and poorly written
Task 2: Shanahan_Talk ingAboutLLMs	Answers to the set of 9 questions regarding Shanahan’s article are comprehensive, demonstrate correct understanding of AI concepts, and are supported by specific evidence from the text; clear and insightful explanations.	Answers address the questions adequately with some analysis; mostly follow formatting guidelines with minor inconsistencies; demonstrate general comprehension of the chapters.	Answers are brief, lack analysis, show limited understanding of the text, or fail to follow the formatting guidelines specified.
Task 3: Literary Analysis of "Bless Me, Ultima"	Selected answers to 12 questions from Chapters 9-11 (four per chap) are well-developed, insightful, and demonstrate critical engagement with the text; answers follow the Marron_StyleGuide formatting rigorously.	Answers address the questions adequately with some analysis; mostly follow formatting guidelines with minor inconsistencies; demonstrate general comprehension of the chapters.	Answers are brief, lack analysis, show limited understanding of the text, or fail to follow the formatting guidelines specified.
Document Formatting and Presentation	Document is perfectly formatted according to Marron Style Guide .	Minor formatting errors present but overall follows Marron Style Guide.	Formatting does not follow the Marron Style Guide or is inconsistent throughout.

Assignments:

****HW_10 [Due: 25 Mar 2026]**

--- Task 1

Define the following terms/acronyms:

- perceptron
- artificial neural network
- large language model (LLM)
- LLM supervised learning
- LLM unsupervised learning
- LLM reinforcement learning with human feedback (RLHF)

- emergence

- application programmer interface (API)
- Python
- token (as used in AI)
- prompt engineering
- machine translation with post editing (MTPE)
- bilingual evaluation understudy (BLEU)
- metric for evaluation of translation with explicit ordering (METEOR)

--- Task 2

Read "01_Shanahan_TalkingAboutLLMs.pdf"

- Intro
- What LLMs Do and How They Work
- Humans and LLMs Compared
- Do LLMs Really Know Anything?
- What about Emergence?

Answer the following questions:

1. AI agents are "unreasonably" effective (i.e, these models have surprised everyone on the power of big data). What are the three ways that AI models have shown to be remarkable?
2. What is the danger of anthropomorphizing AI agents?
3. Shanahan states, "A human infant is born into a community of language users with which it shares a world." How is this fundamentally different from AI agents?
4. How, exactly, do bare-bones LLMs work?
5. Explain the idea of communicative intent. Why don't AI agents have this (yet)?
6. LLMs must be embedded in a larger system that allows for structured prompts of various kinds that orient the LLM. Why?
7. Current AI agents are impressive because developers have turned LLMs into question-answering systems by embedding them in a larger system and using prompt engineering to elicit the required behavior. What are two important take-aways from this phenomenon?
8. What do bare-bones LLMs actually know?
9. Shanahan notes, "the overriding lesson of recent progress in LLMs is that extraordinary and unexpected capabilities emerge when big enough models are trained on very large quantities of textual data." Given this reality, do you think AI agents could become conscious?

--- Task 3

Read Chapters 9, 10 and 11 of "Bless Me, Ultima." Select and answer four (4) questions from the list of questions for each chapter. The questions can be found in the document, "UTECA_StudyGuide_Bless-Me-Ultima.txt. Be sure to format your answers correctly (see Marron_StyleGuide_25-3.pdf).
