Department of Environmental Quality

700 NE Multnomah Street, Suite 600

Portland, OR 97232

July 6, 2018

Dear Department of Environmental Quality,

Thank you for the opportunity to apply for the position of Water Quality Standards and Assessments Manager (Job #DEQ18-0073). This position requires (1) experience in environmental regulatory compliance and rulemaking procedures; (2) technical acumen; (3) strong qualities of people-centered leadership and team building; (4) diplomacy; and (5) practical program management skills. I am ideally qualified to take on the challenges of this position.

Educationally, I have an MS degree in environmental chemistry, an MS degree in Systems Science, and graduate certificates in statistics and sustainability. I have passed comprehensive exams in the Earth, Environment and Society doctoral program at Portland State University and my GPA is 3.79 on 133 graduate (quarter) hours.

I have extensive experience in environmental regulatory compliance. I spent four years translating federal, state, and US Department of Energy regulations into actionable items such as standard operating procedures and technical approach documents that demonstrated compliance. I wrote a white paper for the Oregon Environmental Council on reactive nitrogen in freshwaters throughout Oregon. I understand water quality assessment as well as water quality standards policy, regulations and implementation procedures.

I have excellent oral and written communication skills, the ability to explain complex data analysis to diverse community partners, and to work collaboratively with key stakeholders. I have provided effective written and oral communication materials to community stakeholders, to clients, and to the university community. I was awarded a National Science Foundation Integrative Graduate Education and Research Traineeship (IGERT) Fellowship for my scholarship and interest in transdisciplinary collaboration. I designed the *Victory Garden Plus!* program to promote food security in Portland's urban foodshed. I have been an editor for the Complexity Explorer Project, and I have served as a peer reviewer for many of my colleagues. I have written two major grant applications in response to requests for proposals from the National Science Foundation. I have given dozens of presentations to audiences as diverse as the university scientific community; the City of Portland; attendees at the US International Association of Landscape Ecologists conference; attendees at the EcoDistricts Summit conference; children, young adults (grades 6-12) and their parents; and adults with special needs. I have extensive experience working with the general public as a public school teacher and hosting public meetings under the National Environmental Policy Act. I have demonstrated ability to establish and maintain effective working relationships with internal staff as well as with private sector clients, representatives from state and federal agencies, and with Tribal governments. As a recent graduate student I have maintained effective working relationships with colleagues and professors.

Because team building is so important to me I joyfully engage with supervisees, supervisors, and stakeholders. As a team leader, I take a whole soul approach towards management and building rapport. A whole soul leader recognizes that people, including themselves, are whole beings with a suite of emotional, spiritual, scientific, technical, and intellectual skills. A successful whole soul leader is able to access the full suite of their own skills while at work and even more importantly, is able to create the conditions for others to do likewise.¹ I recognize and value individual and cultural differences: I am bi-cultural, fluent in English and Spanish. Often, sensitive issues and situations arise in working relationships. I exercise tact and diplomacy in such cases. I find great value in listening carefully with the intention of building enduring and fruitful relationships. This has been supported by my training in Marshall Rosenbergs Non-Violent Communication. I am accustomed to public scrutiny and

¹M. R. Fairholm. "Different perspectives on the practice of leadership". In: *Public Administration Review* 64.5 (2004), pp. 577–590.

accountability. I have a client-based, customer service attitude and do expect others in public service to respond promptly and courteously to any request. I have excellent people management and coaching skills having spent nearly a decade as a science teacher for Portland Public Schools.

I have solid program management skills and am meticulous about record keeping, office organization, and reporting. Successful programs are measured by successful outcomes. From my perspective as a systems thinker and a member of the American Evaluation Association, successful programs have an evaluation-conscious culture. Recently as project manager and QAQC officer for the LANDIS-II Software Enhancement Project I managed a team of programmers, designed and developed algorithms for standardized workflows, set and tracked goals and objectives (as milestones), designed and developed QAQC protocols, and tracked the project's budget. Project progress was summarized in weekly reports to our client, the US Forest Service. LANDIS-II is a spatially explicit, process-driven model of landscape change.

To identify and address program implementation problems and to resolve difficult technical, administrative, fiscal, regulatory and work-related problems, I gather critical information for the analysis of outcomes, and make sound judgments from the data. I have developed multivariate Monte Carlo methods (in R) to evaluate investor risk for return on investment in the film production industry.

Lastly, as a culturally connected, creative, warm-hearted, enthusiastic person, I am mission-driven. As an applied scientist I am fully committed to public service in support of people and the environment. For example, I worked as a data scientist consultant (*pro bono*) with United Way to help build evaluation tools that could prove useful to individual social service organizations in helping them assess their own system of social service provisioning. I volunteered with the Richmond Neighborhood Association as chair of the Sustainability Committee. I volunteered with Portland Fruit Tree Project as a Harvest Leader. I recently volunteered with Voz to provide language translation services for their two-day Occupational Safety and Health Administration (OSHA) training. I understand the foundations and practical applications of environmental regulatory compliance. I can provide program leadership and set program priorities. I am skilled in diplomacy and able to communicate effectively and work collaboratively with a wide variety of stakeholders. I readily shift scales of perspective and adjust priorities accordingly. I can evaluate program effectiveness and design strategies to improve program effectiveness. And I thrive in fast-paced, people-rich environments!

I do hope you will consider me for this very important position. And please feel free to contact me if you would like additional information or portfolio items.

Thanks so much.

En paz,

A handwritten signature in black ink, appearing to read "B. Marron", is written over a faint, circular, light-gray watermark. The watermark contains the text "Portland Public Schools" and "Office of the Superintendent" around a central emblem.

Bruce D. Marron, M.S.
