

Question Responses OCVRP

November 24, 2025

0.1 Objective

To provide program management and project analyses in support of evidence-based policy making that benefits our communities and our planet.

- I. Which of the following best describes your highest related level of education?
 - A. Master's plus additional coursework
- II. If you selected "Some College Coursework, No Degree Received" in question 1, how many upper division (300 level or higher) credit hours have you completed? 12
N/A
- III. If you selected "degree and additional coursework" in question 1, how many additional upper division (300 level or higher) credit hours have you completed?
 - A. 144-191 Quarter hours/96-127 Semester hours
- IV. If you selected "Some College Coursework, No Degree Received" or "degree with additional coursework" in question 1, please identify the focus of your upper division (300 or higher) coursework. If you selected any other option, enter N/A.
 - A. I earned an MS in environmental chemistry in 1989 and had upper division courses in theoretical and applied chemistry at that time. During my recent tenure at Portland State University I earned an MS in systems science as well as graduate certificates in sustainability and in statistics. My additional coursework was in large measure in support of my work in agroecology in the Earth, Environment, and Society doctoral program. Upper division coursework included (1) research methods classes, (2) classes in data science and scientific inference, (3) classes in computer-based simulation and probability for modeling complex adaptive systems, and (4) general interest classes in landscape ecology, science communication, grant writing, and economics. The focus of the coursework for my NSF ESUR-IGERT scholarship was on ecosystem services: the wise use of natural resources for maintaining long-term ecosystem functionality and resiliency in an urban environment.
- V. Which of the following best describes the focus of your degree?
 - A. Environmental science

VI. If you selected "Other Related Degree" in question 5, please identify the focus of your degree. If you selected any other option, enter N/A.

A. N/A

VII. Which of the following best describes your level of experience coordinating or administering a program related to Permitting or Environmental Quality?

A. 8 years

VIII. With which of the following computer software applications are you proficient? (Check all that apply) Microsoft Word Microsoft Excel Microsoft PowerPoint Microsoft Outlook

IX. Which of the following skills or abilities do you currently possess? (Check all that apply) Strategic planning Implementing and resolving complex problems with multiple stakeholders Experience with state rulemaking process Managing others tasks and deadlines Working with advisory committees Building collaborative partnerships Communicating effectively, both orally and in writing, with individuals from all levels of an organization Adapting easily and dealing with shifting priorities and changing demands Collecting, verifying and compiling information from multiple resources in a format most relevant for the end user High degree of accuracy and attention to detail Convening and supporting diverse groups while encouraging engagement, active listening and group problem solving Project Management
**Implementing a new environmental or permitting program

X. Which of the following project management duties have you performed? (Check all that apply) Scope and resource planning Activity definition Sequencing Duration estimating Developing and managing project budgets Developing and managing project schedules Reporting progress Building deliverables and project teams Reporting status of deliverables Coordinating and overseeing all project resources including IT technical staff, customers, and contracted resources Project communications Coordination with the project sponsor Ensuring that project resources are effectively and efficiently used Identifying and implementing customer requirements Identifying and implementing scope management Identifying and implementing change control Identifying and implementing issues logs Identifying and implementing risk management Identifying and implementing quality assurance Partnering with vendors and stakeholders Change Management

XI. In 1 to 2 paragraphs, please describe your understanding of the Oregon Clean Vehicle Rebate program and how its implementation will improve Oregon's air quality.

A. On August 29, 2017, Oregon Gov. Kate Brown signed HB 2017, a \$5.3 billion funding bill that invests in transportation infrastructure as well as in efforts to

reduce traffic congestion, make biking more accessible and incentivize electric vehicle (EV) use. Sections 148 to 157 of HB 2017 define a new, zero-emission and EV rebate program and establish a Zero-Emission Incentive Fund (ZEIF) to fund the new rebate program. Moneys in the ZEIF are to be continuously appropriated to the Department of Environmental Quality (DEQ) to carry out the provisions of the new EV rebate program. The primary source of moneys into the ZEIF will come from a tax imposed on each vehicle dealer for the privilege of engaging in the business of selling taxable motor vehicles. The tax is 0.5 percent of the retail sales price of a taxable motor vehicle (HB 2017, Section 90). HB 2017 was promulgated as Chapter 750, Oregon Laws 2017 and the provisions therein became effective October 6, 2017. Oregon Laws 2017, Chapter 750 was subsequently and officially amended by HB 4059 in April 2018. HB 4059 authorized the Environmental Quality Commission (EQC) to adopt the administrative rules necessary to carry out the provisions of Chapter 750. Chapter 340, Division 270 of the Oregon Administrative Rules (OAR) implements and codifies Oregon Laws 2017, Chapter 750, as amended by HB 4059. OAR 340-270 was officially adopted by the EQC and the zero-emission and EV rebate program became effective on May 14, 2018. DEQ has named the zero-emission and EV rebate program, The Oregon Clean Vehicle Rebate Program (the Program). The Program provides rebates for the purchase of certain eligible vehicles. Those vehicles that qualify as "eligible vehicles" are defined at OAR 340-270-0030(4). Specifically, rebates are available for eligible light-duty zero-emission vehicles and plug-in hybrid electric vehicles with electrochemical energy storage capacities of 10 kilowatt hours or more (\$2,500 rebate); eligible light-duty zero-emission vehicles and plug-in hybrid electric vehicles with electrochemical energy storage capacities of less than 10 kilowatt hours (\$1,500 rebate); eligible neighborhood electric vehicles (750 rebate); and eligible zero-emission motorcycles (750 rebate). There is an additional Charge Ahead rebate of \$2,500 available for the purchase or lease of new or used vehicles that meet the requirements of OAR 340-270-0410 if the purchaser is from a low or moderate income household. Note that the Program has detailed requirements for persons applying for the zero-emission vehicle standard rebates as well as for persons applying for the Charge Ahead rebate. These requirements are given at

OAR 340-270-0120 and at OAR 340-270-0430,

When fully implemented, the Oregon Clean Vehicle Rebate Program will certainly reduce carbon emissions as well as NOx emissions at a significant scale. This is because the Program is expected to provide about 4800 full rebates per year which, ideally, will substantially increase the number of EVs and thus reduce the number of vehicle miles driven by conventional vehicles with internal combustion engines. Conventional vehicles produce direct carbon emissions from combustion (tailpipe emissions) as well as from evaporation

(fuel system emissions). EVs that are solely battery-powered produce zero direct emissions; hybrid EVs produce some direct emissions when not in all-electric mode, however, their direct emissions are typically lower than those of comparable conventional vehicles. Determining the full, quantitative impact to Oregon's air quality from the Program in terms of reduced carbon and NOx emissions will require a set of explicit assumptions, validated emissions data, and a well-defined methodology. This is because all vehicles produce substantial life cycle emissions and calculating them is fairly complex. That said, there are reliable sources for these types of life cycle emission calculations such as Argonne National Laboratory's report, "Well-to-Wheels Energy Use and Greenhouse Gas Emissions Analysis of Plug-in Hybrid Electric Vehicles," and the National Renewable Energy Laboratory's report, "Emissions Associated with Electric Vehicle Charging: Impact of Electricity Generation Mix, Charging Infrastructure Availability, and Vehicle Type." Both of these reports are readily available from the Dept. of Energy's Alternative Fuels Data Center.

XII. How many years of experience do you have managing projects?

A. 8 years

XIII. For question 12, please provide a brief description (1 to 2 paragraphs) of the types of projects you managed, your role, whether you were required to manage a budget, and if you managed contractors and contracts during the project.

A. As a consultant with both Benchmark Environmental Corp. and Marron and Associates, Inc., I managed a wide variety of projects including a project to design a series of experiments for the Idaho National Engineering Laboratory to determine if theoretical methods could be used to predict flammability of headspace volatile organic compounds (VOCs); a project to develop a method for the comparative assessment of chemical and radionuclide risks for the Waste Isolation Pilot Plant; various projects related to the environmental assessment of public highway improvement projects; various projects related to obtaining Section 404 permits, obtaining NPDES permits, and developing water quality certification plans; and a project that required the use of CAL3QHC and MOBILE 5a to model carbon monoxide emissions. These projects did have subcontractors in some cases although I was not directly involved with the budgets. More recently, as project manager and QAQC officer for the LANDIS-II software enhancement project, I hired and supervised a team of computer programmers, designed and developed algorithms for standardized workflows using readily available team productivity platforms such as Slack, Trello, and GitHub, and designed and developed QAQC protocols for tracking and testing software changes. Project progress was summarized in weekly reports to our client, the US Forest Service. I was responsible for budget accountability and direct oversight of the independent contractors. And over the last few

months I have worked as an independent consultant first, as a data scientist for the development of financial risk assessment methodologies for the film industry, and second, as a regulatory compliance specialist for the development of deconstruction certification tools. In both cases I was completely responsible for bidding the projects and for tracking the budget. I will also mention that in the process of writing two, NSF grants I worked extensively with the finance and compliance personnel from Portland State University and North Carolina State University to develop the budgets.

XIV. How many years of experience do you have providing technical presentations to audiences with a range of technical expertise in the topic being presented?

A. 8 Years

XV. In 1 to 2 paragraphs, please describe the types of presentations you have provided, the audience involved, and how you adjusted your presentation to meet the needs of depending on the audiences' background on the topic being presented.

A. I have given dozens of project presentations to a wide variety of audiences. As a regulatory environmental specialist under NEPA, I regularly explained the practical application of environmental regulations to clients and stakeholders, especially regulations under the Clean Water Act and the Resource Conservation and Recovery Act. Clients included various highway engineering firms; stakeholders included the general public and Tribal members. As chair of the Sustainability Committee for the Richmond Neighborhood Association I regularly spoke about neighborhood sustainability and resilience at public meetings. I also presented the Committee's work with the Portland Fruit Tree Project at the EcoDistricts Summit. The work involved the design and implementation of a harvest-by-bike program. I was contracted by the Oregon Environmental Council (OEC) to write a white paper on reactive nitrogen in Oregon and presented the technical results to OEC staff. As a graduate student I have presented proposals for, and the results from, various research projects. For example, my colleague and I evaluated the potential changes in the ecosystem services provided by the Clackamas River Basin resulting from changes in land use and land cover in the Upper Basin due to climate change. We presented the results of our detailed modeling efforts to various stakeholders including PGE, the City of Happy Valley, the US Forest Service, the Clackamas River Water Providers, the Clackamas River Basin Council, and the USGS. I have presented my research ideas for agricultural-ecological mutualism to attendees at the US International Association of Landscape Ecologists conference. I presented my idea to enhance the urban food shed with the Victory Garden Plus! program to the City of Portland. Lastly, as a science teacher for Portland Public Schools for nearly a decade, I spent hundreds of hours preparing and presenting complex material such that it would be received in a readily digestible form by students

from 6th to 12th grade.

XVI. How many years of experience do you have drafting, evaluating, and overseeing contracts?

A. 2 years

XVII. How many years of experience do you have with constructing/tracking/improving metrics and program goals?

A. 8 years

XVIII. Which of the following certifications do you currently possess?

A. none of the above
