HW_02 Jargon, Science, Mental Processes/Mental Models (convert to 10 point scale)

Criteria	Excellent	Satisfactory	Needs Improvement
Task 1: Level of Jargonization	Exceptional obfuscation and fluff; excellent translation	Very good obfuscation and fluff; good translation	Some obfuscation; poor translation
Task 2: Definition of Science	Clear, robust definition of science as a formal process of knowledge acquisition	Good definition of science as a formal process of knowledge acquisition	Poor definition of science as a formal process of knowledge acquisition
Task 3: Mental Processes and Mental Models	Demonstrates profound insight into engineering/scientific problem-solving methodology with comprehensive and nuanced analysis Exceptionally detailed explanation of i) initial problem-solving steps; ii) foundational principles; iii) explicit and implicit assumptions; and iv) model utility with critical analysis and theoretical justification	Provides basic understanding of problem-solving process with moderate depth Basic description of i) initial problem-solving steps; ii) foundational principles; iii) explicit and implicit assumptions; and iv) model utility	Minimal or incorrect understanding of problem-solving methodology No coherent explanation of i) initial problem-solving steps; ii) foundational principles; iii) explicit and implicit assumptions; and iv) model utility
Document Formatting and Presentation	Document is perfectly formatted according to Marron Style Guide .	Minor formatting errors present but overall follows Marron Style Guide.	Formatting does not follow the Marron Style Guide or is inconsistent throughout.

Assignment:

*** HW_02 [Due: 30 Sept 2025]

-- Task 1

Take about five or six lines from your favorite poem, music lyric, prose, or "dicho" and jargonize it. Make the phrases as complicated as possible. In your written document (i.e., your homework paper) you must provide the following:

- i) The original material and its source
- ii) Your jargonized version of the original in both English and Spanish

Standard format applies. We will try to guess the original when you read the jargonized version in class

--- Task 2

What do you consider to be science? Do you think science and technology always lead to progress? Present your opinion in

a ~ one (1) paragraph statement (English).

-- Task 3

Investigate the mental process that engineers and scientists use to solve a problem. More specifically, answer

the following questions (English):

- i) Given a design or conceptual problem, what is a first step that engineers and scientists are likely to take? Why?
- ii) What are the accepted foundations for conceptualizing a problem? That is, what is the worldview or the overarching mental model that lies at the very foundation of science and engineering? What are the components of this worldview?
- iii) What ASSUMPTIONS are made, consciously or not, when engineers and scientists begin modeling a problem?
- iv) When are models useful for reaching a solution to a problem? If no solution presents itself what can the engineer or scientist do?

Standard format applies and references must be included.

NB. Marron's modified APA format applies (see Class Materials in Teams). As always, assignments must be printed (i.e., hard copy) and submitted to the instructor on the due date (unless duly noted). Students should save copies of all assignments in PDF format.
