HW_06 Resnik's Ethics; Vocab; Tame vs Wicked Problems; SOPs Translation

(convert to 10 point scale)

Criteria	Excellent	Satisfactory	Needs Improvement
Task 1: Qs on Resnik's ethics paper	Response provided; nine questions a) two (2) "striking examples of ethical scientists; b) compare/contrast view of ethics over time; c) science value-free?; d) accepting hypothesis; e) subconscious values?; f) value neutrality?; g) arguments for social responsibility; h) ethical challenges of socially responsible science; i) five recommendations for helping scientists deal with moral and ethical dilemmas; exceptionally detailed and accurate explanations	Adequate response	Poor response; missing elements
Task 2: Tame vs Wicked Problems	Demonstrates profound insight into the similarities and differences between "tame" problems and "wicked" problems.	Adequate comparisons; adequate translation; some semantic errors	Poor comparisons; poor translation; semantic errors
Task 3: Translation EXCERPTS_P1_EPA _Guidance-for-SOPs	Response provided; perfect translation maintaining original meaning; no semantic errors; seamless, professional academic translation	Partial definitions	Incomplete and missing definitions
Document Formatting and Presentation	Document is perfectly formatted according to Marron Style Guide .	Minor formatting errors present but overall follows Marron Style Guide.	Formatting does not follow the Marron Style Guide or is inconsistent throughout.

Assignment:

*** HW_06 [Due: 28 Oct 2025]

-- Task 1

In his paper, "The Ethical Challenges of Socially Responsible Science." David B. Resnik sets out some of the ethical dilemmas for scientists and offers some recommendations. Answer the following questions related to Resnik's paper:

1. Present two (2) "striking examples of scientists who demonstrated a strong commitment to social responsibility." Explain.
2. How is the "current consensus concerning the social responsibilities of scientists ... in sharp contrast to the opinion that prevailed several decades ago?"
3. Do you think that science should be "value-free"? Does Resnik think so? Explain why or why not.
4. Resnik states that, "Rudner (1953) argued that scientists must make value judgments when they accept or reject hypotheses, because the amount of evidence needed to accept a hypothesis depends on the consequences of accepting it." What does this mean?
5. How might values "operate at a conscious or subconscious level"?
6. What does Resnik mean by "value-neutrality"? How does it apply to working scientists?
7. What are Resnik's three main arguments for social responsibility? Do you agree?
8. According to Resnik, what are the three ethical challenges of socially responsible science?
9. Briefly summarize Resnik's five recommendations for helping scientists deal with moral and ethical dilemmas.

-- Task 2

Briefly explain the difference between "tame" problems and "wicked" problems. If given a choice, which would you prefer to work on?

---Task 3

Translate "EXCERPTS_P1_EPA_Guidance-for-SOPs.txt" into Spanish.

NB. Marron's modified APA format applies (see Class Materials in Teams). As always, assignments must be printed (i.e., hard copy) and submitted to the instructor on the due date (unless duly noted). Students should save copies of all assignments in PDF format.
